AppVision

PSIM · OPEN INTEGRATION PLATFORM

Turn events into decisions.
Turn decisions into action.

The open PSIM that unifies every security system into a single operating picture, built for operational performance, resilience and freedom to choose your technology

More systems, more alerts.

Slower decisions.

Every system brings its own data, alarms and interface. Operators juggle screens, context gets lost, and response slows down precisely when every second counts.

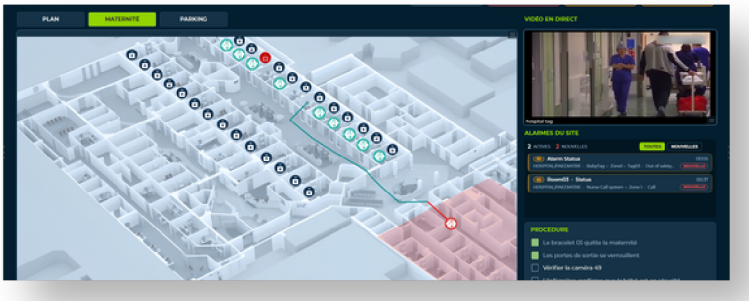

The challenge is no longer collecting more data. It is making sense of it, fast. AppVision connects every system, puts each event in context and surfaces the situations that demand immediate action.

One picture. Tailored decisions.

Coordinated action.

An operator, a supervisor, a security director and an executive don't need the same information. AppVision gives each of them the context to make the right call at the right time, while sharing a common operating picture and standardized procedures.

Operator

Act

- Prioritized alarms
- Step-by-step response procedures
- Video verification
- One-click response actions

Instant situational awareness

Supervisor

Coordinate

- Event correlation
- Multi-site visibility
- Critical incident management
- Team coordination

Full command of operations

Security Director

Manage

- KPIs
- Operational performance
- Risk analysis
- After-action reviewse

Data-driven decision support.

Executive Leadership

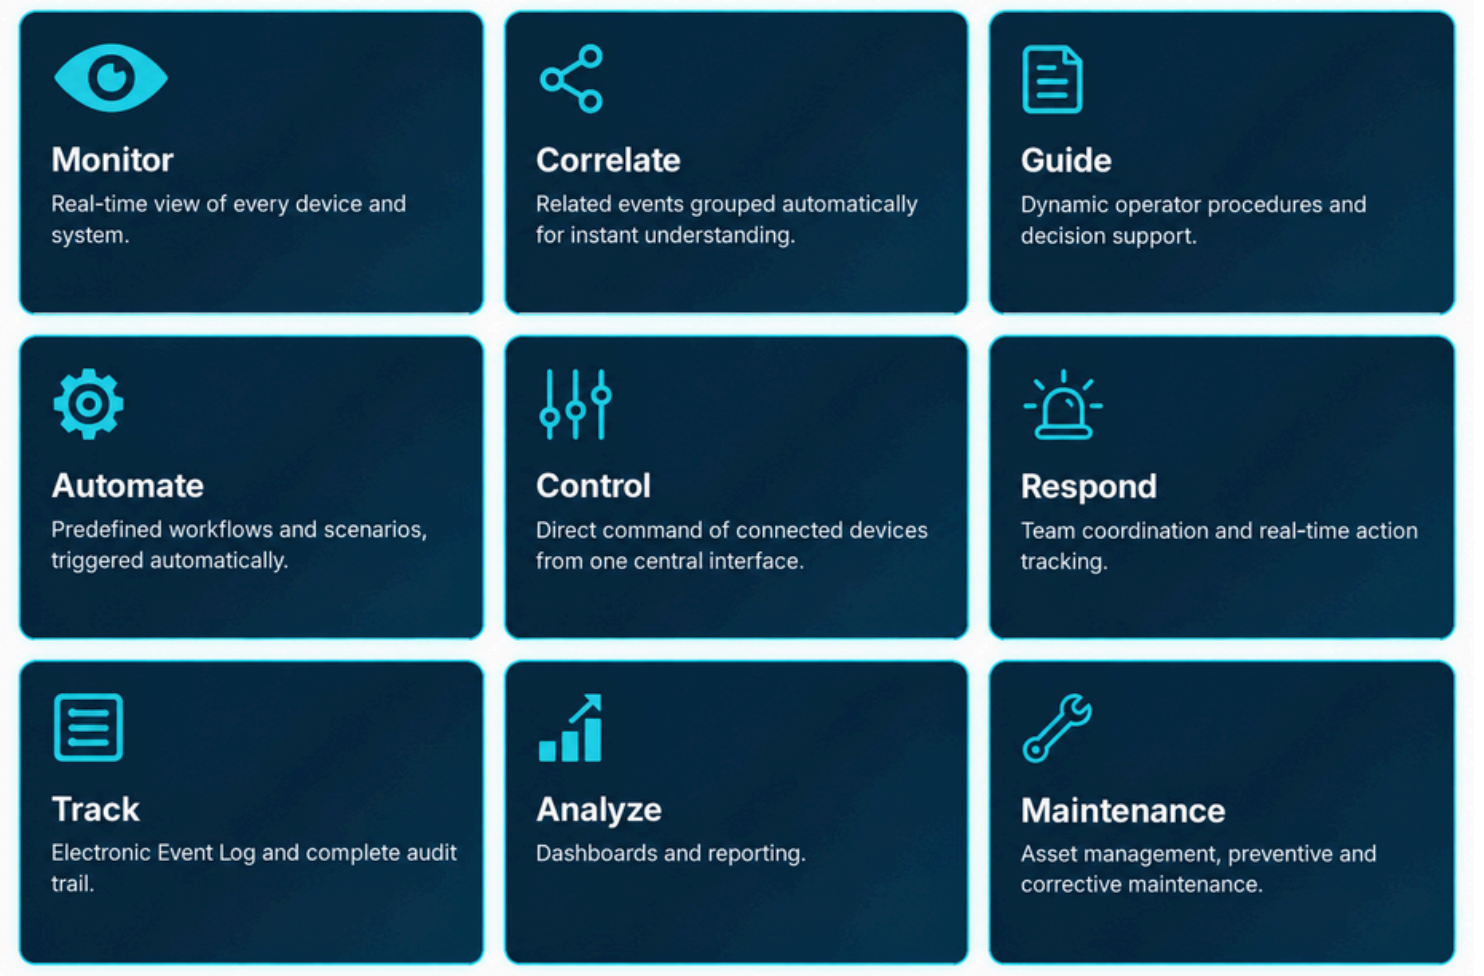

Anticipate

- Executive reporting
- Trends
- Compliance
- Resilience

A strategic view of security risk.

From event to action.

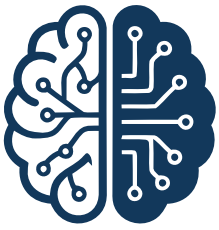

AppVision is not a blank canvas to develop, or a patchwork of technical building blocks to assemble. It is a complete, ready-to-configure operations platform with every essential function built in.

AI that works for your operators

AI doesn't replace operators. It gives them the context they need to decide and act, faster.

- Query the platform in natural language
  Uncover hidden correlations
- Detect weak signals
- Recommend the right actions
- Adapt procedures dynamically

BUILT TO EVOLVE

Connect what you have. Prepare for what's next.

Your systems evolve. Threats evolve. Operations evolve.
Your PSIM must evolve with them.

OPENNESS

A PSIM should never limit what you can do. AppVision is an open integration platform, designed to connect any communicating system and to let partners extend its capabilities themselves.

- 400+ connectors available
- Any system with an API or interface
- Open, mature, fully documented APIs and SDK
- Partners can build their own connectors and use cases
- OEM and white-label models

VENDOR NEUTRAL

Vendor neutral by design Customers and partners stay free to choose their technologies, their vendors and their roadmap, today and tomorrow.

- Freedom of technology choice, zero lock-in
- Independence from hardware manufacturers
- Protect of existing investments Full ownership and control of your data
- Competitive sourcing of integrators and suppliers

SCALABILITY

From a single site to multi-country operations, AppVision grows with your organization and new use cases: one platform, one database, no re-architecture.

- Deployments across 30+ countries worldwide
- Freedom to choose products and technologies
- Unlimited capacity
- Distributed architecture Flexible hosting options

CYBERSECURITY & COMPLIANCE

Engineered to meet the security, auditability, compliance and resilience requirements of critical organizations.

- Secure
- Regular security updates
- Seamless integration into IT environments
- Long-term regulatory compliance
- Resilience built into the architecture

Built to integrate. Designed to endure. Ready to evolve.

ONE PLATFORM. SHARED VALUE.

Protect customer investments.

Grow partner opportunities.

End Users

Decide faster.
Act with confidence.

- Share a unified view of your security operations
- Make faster, more reliable operational decisions
- Protect past investments and keep your freedom to evolve
- Lower operating costs
- Reduce regulatory and operational risk

See. Understand.
Decide. Act.

Integration Partners

Deliver more than a project.
Build lasting value

- Own the customer relationship
- Build and share your own connectors
- Expand your service portfolio
- Tailor the platform to your markets and your brand
- Generate recurring revenue

Build. Customize. Deploy.
Monetize.
